# TRIPLE DECKER

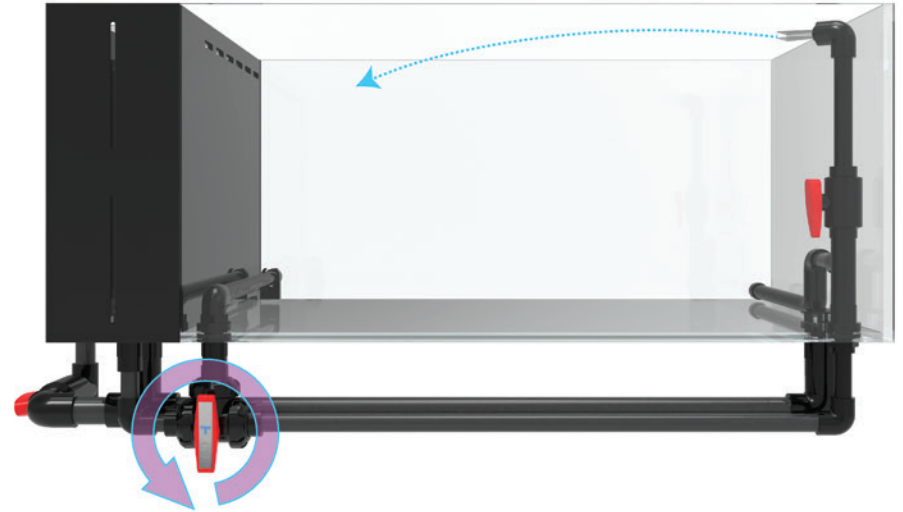

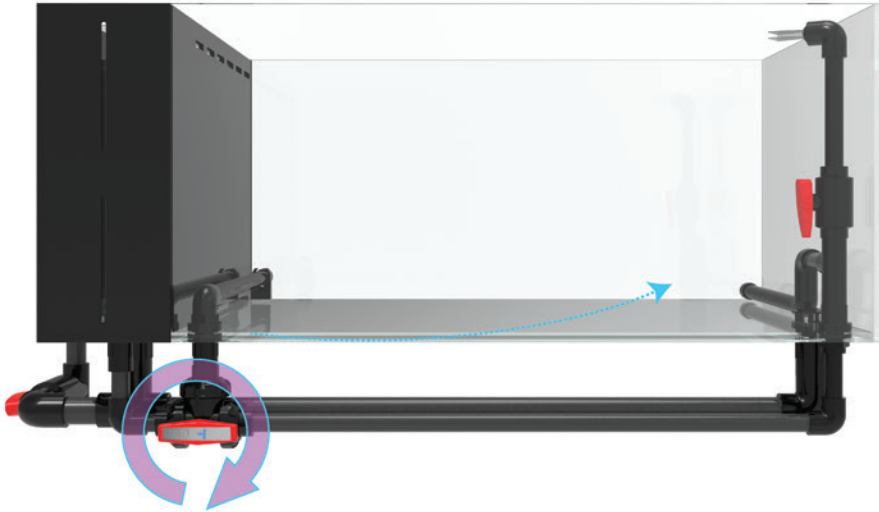

## ALL-IN-ONE PLANT HOLDING SYSTEM

Similar to the Foresta Plant Holding Systems, the All-In-One Plant Holding System tanks are designed to stock and cultivate several hundred aquarium potted plants.

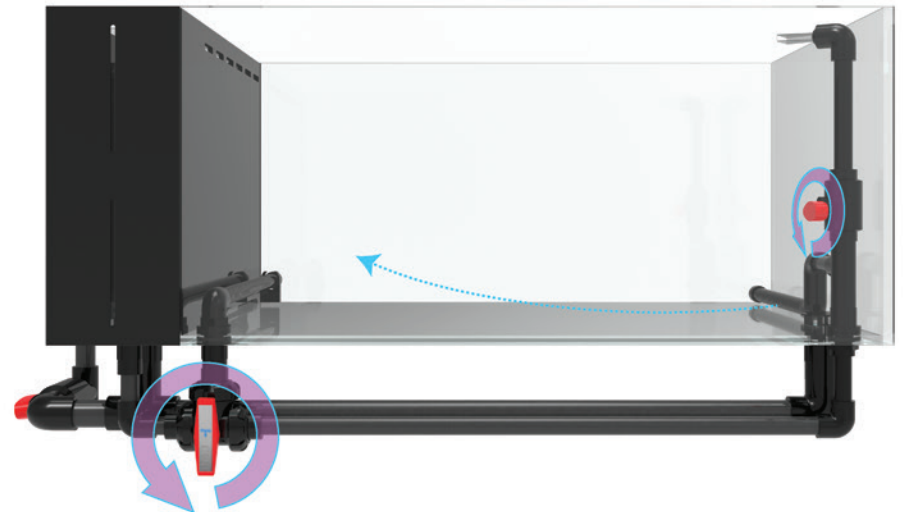

① Prototype model shown

### Shallow aquarium

The shallow tank height provides ample room for growth and allows for easy plant access. All three All-In-One Plant Holding Systems are housed in a Triple Decker Display Stand, similar to the Double Decker Display Stand. Both feature the same aluminum build quality and intuitive, user-friendly installation.

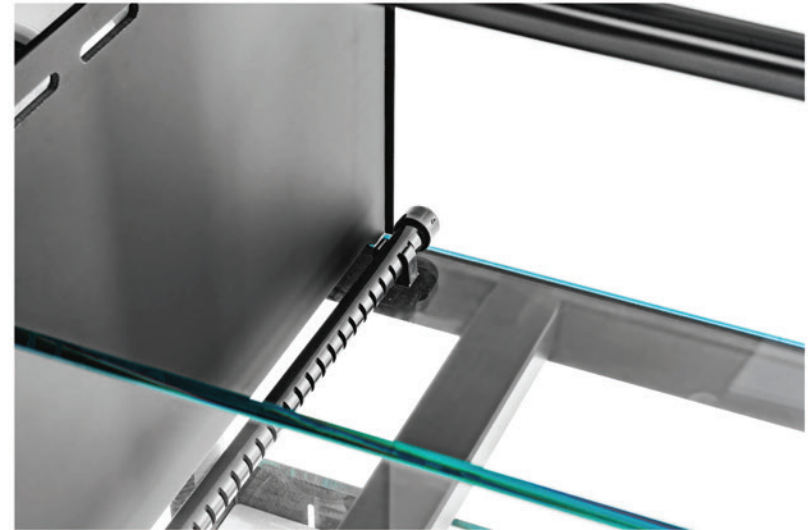

# FLOW ADJUSTMENT

UN  
SYSTEMS

Each individual tank benefits from having its own separate filtration system which connects to a single drain pipe. The water flow can be controlled by using the 3-way valves to direct water either to the top surface, or beneath the plant trays. This unique feature provides a quick and effortless way to maintain each tank.

### Plumbing

A closer look at both ends of the aquarium's internal plumbing show a built-in filtration chamber similar to the Foresta Plant Holding 174 System. Inside the chamber are three thick filter bags that efficiently trap floating leaves and plant detritus after the waste passes through surface skimmer cutouts on the chamber wall. All filter bags can be quickly removed and rinsed as needed.

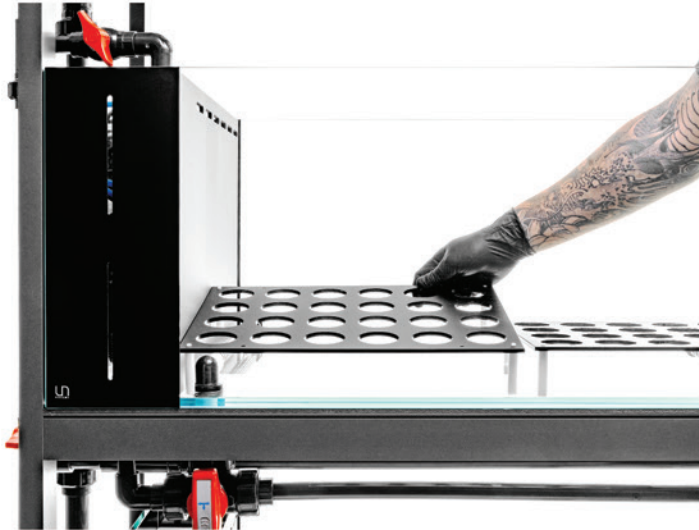

### Water flow

A large pump can be placed in the filtration chamber to effectively utilize adjustable plumbing and customize the water flow.

### CO2 injection

Support plant growth by integrating inline CO2 injection into the plumbing system, keeping it discreet and organized.

### Potted Plant Trays

Potted aquarium plants are easy to organize and display with the included trays. Similar to those in the Foresta Plant Holding System, each tray is height-adjustable, allowing for customized displays based on available plant species, height or color.

### Hassle-free maintenance

All plumbing is interconnected with the main system on the left side of the Triple Decker Display Stand. This central location allows users to perform water changes on all three tanks simultaneously.

The drain and return pipes clamp neatly to the side of the stand. The pipes also come with pre-installed hose barbs to allow users to connect to drainage lines as well as standard hoses to streamline water changes.

① Displayed at Reefapalooza 2024 alongside the Foresta Plant Holding System 174 Double Decker Display Stand

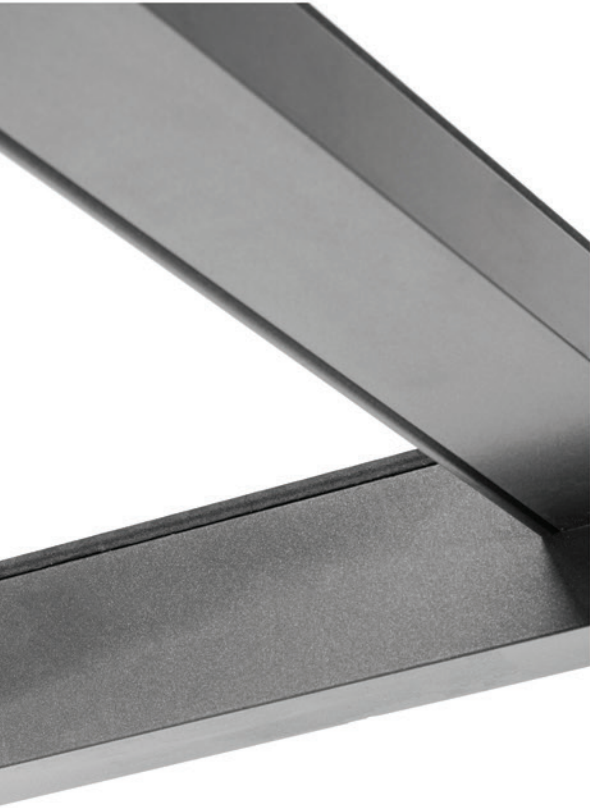

**Metal construction**

The Double and Triple Decker Display Stands have an aluminum build and are easy to install. Each stand comes with screws and a tool for assembly.

**Tank mat included**

A nano foam mat with a hard plastic layer is pre-installed on the tank shelves, making it easier to lift and slide the tanks into place.
