2025 CATALOG

### **HYBRID PLANT HOLDING SYSTEM DOUBLE DECKER**

The Hybrid Plant Holding Double Decker Display builds on the Ultum Nature Systems Plant Holding Systems by merging the Triple and Double Decker, enabling users to showcase both All-In-One and Foresta Plant Holding Systems. The result is a combo display featuring both aquatic and terrestrial plants.

### Flush and Drain Pipes

Incorporates the main drain and refill lines from the All-In-One Plant Holding System, simplifying water changes within the system.

### Valves and control

The central three-way valve customizes system flow with two modes: Standard and Flush.

The ball valve on the return plumbing lets users switch between two flow options: the duckbill or the lower horizontal spray bar.

## Illuminate and impress

Ultum Nature Systems Light Brackets suspend light fixtures above All-In-One Plant Holding System Aquariums, while the same light fixture is placed atop all Foresta Plant Holding Systems.

### **System Incorporated**

The Foresta Plant Holding System 174 functions as a standalone unit, with fully integrated plumbing and filtration, like other variations of this tank.

### **CO2 Injection**

CO2 injection is available for the fully aquatic All-In-One Plant Holding System via an inline diffuser, delivering CO2 through the outflow. In contrast, the Foresta Plant Holding System 174 does not require CO2 injection, as the plants will have access to atmospheric CO2.

**Switch it up!**

Users can choose the tank orientation before assembling the Display Stand. This decision is crucial, as vertical bar positioning varies slightly to accommodate the All-In-One Plant Holding System's plumbing requirements.
